5. Close to the factory is a machine shop training school, the Technicum Mechaniczne, where men are trained for working at the factory. While training they also work three days a week in the plant. Construction of new school workshops began at the same time as the plant expansion.

6. A military unit which is quartered in the factory area and has its own training grounds fulfills the guard duties. Watch towers manned by guards are equipped with light machine guns. The towers are located at the corners of the plant area, and there is also one on top of the water tower.*****

25X1 *	Comment: Heavy arms and tanks were produced at this factory during the German occupation. It was generally believed the current arms production was
25X1	exported.
**	Comment: It has been reported that two types of Soviet machine guns and single shot, 6 mm. Mosin sports rifles are also produced at Radom.
25X1 ***	Comment: Older workers at the plant recognized some of this equipment, all of which was in a bad state of repair indicating little or no care was
	taken of it while in Soviet hands, as machinery formerly belonging to Fabryka Mechaniczna i Broni and removed by the Soviets early in their occupation as German war assets.
25X1 _{****}	Comment: It has been reported that the Polygon Training Camp at Zielonka near Warsaw has been used for testing Radom rifles.
25X25X1*****	Comment: it is reasonable to assume
	the plant is surrounded by some sort of protective fencing, which probable fact is only implied by his words.
